ACRYLIC

DEGLAS® IMPACT Double-Skinned Sheet is key to our structural, durable, maintenance-free T-Bar Roof Systems.

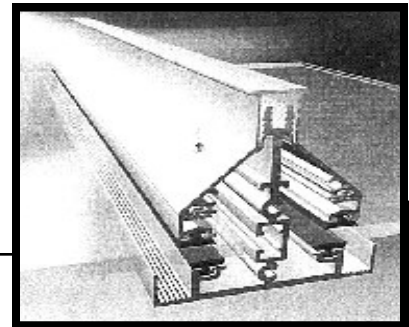

This isn't the flimsy 6mm or 1/4" product found in many of the competitions offerings. At a full 16mm or 5/8" in thickness, it far outperforms the others in structural capabilities

Add to this its UV Blocking capabilities, it's hail resistance, light diffusing properties and NO Drip Surface. You'll soon discover in virtually all aspects, there are few products to match this one.

For those who insist on Glass for particular applications, specific design reasons or simply from personal preference, we are equally able to accommodate.

Our unique glazing spline inserts into the same T-Bar system used with our Acrylic systems to offer the same structural performance and long-term maintenance free dependability.

GLASS

Acrylic or Glass, your T-Bar Roof system has undergone the test of time and withstood whatever Mother Nature has chosen bring our way. Heavy snow loads, high winds, driving hail and intense heat have all been overcome for decades in real world situations.

Durable, Maintenance-Free finishes and engineered, structural capabilities are combined in an attractive, easy to install system that you can be confident and proud to include in your project.

Further confidence can come from knowing you are dealing with a dynamic "hands-on" company that has been in the field working with the system for several decades.

Chances are your "Unique Situation" or "Tricky Application" has been encountered before and we are more than willing to help every step of the way. Even more likely is that once you come to know the T-Bar Roof System, you'll quickly discover for yourself that the "Unique Situation" is easily accommodated and the "Tricky Application" isn't quite so tricky after all.

Call for your "Free" Estimate Today!
